

IN THE CLAIMS:

A clean version of all pending claims is set forth below:

53/12/18 1. *(Once Amended)* A system for the delivery of voice messages to a voice service subscriber using voice commands, comprising:

A18 a call server, the call server initiating an outbound communication to a voice service subscriber to commence a voice service session;

an input module, the input module sensing a voice input command from the subscriber during the voice service session; and

a content delivery module, communicating with the input module, the content delivery module selecting at least one of a plurality of voice messages to deliver to the subscriber according to the voice input command.

2. The system of claim 1, wherein the input module comprises an analog to digital converter which converts the voice input command to digital voice data.

3. The system of claim 2, wherein the input module stores the digital data.

4. The system of claim 1, further comprising a discriminator module, the discriminator module communicating with the input module and the content delivery module and identifying the digital voice data as at least one of a plurality of predetermined commands.

5. The system of claim 4, wherein the content delivery module presents the subscriber with voice message content according to the digital voice data.
6. The system of claim 5, wherein the content delivery module presents the subscriber with at least one voice command prompt to query voice input from the subscriber.
7. The system of claim 6, wherein the voice command prompt comprises a sequence of voice command prompts.
8. The system of claim 7, wherein the sequence of voice command prompts comprises a set of voice command prompts adaptively presented according to the digital voice data.
9. The system of claim 1, wherein the input module authenticates the subscriber for receipt of the voice messages.
10. The system of claim 9, wherein the authentication comprises at least one of PIN verification and voice identification.

- SP
11. *(Once Amended)* A method for the delivery of voice messages to a voice service subscriber using voice commands, comprising:
- initiating an outbound communication to a voice service subscriber to commence a voice service session;
 - sensing a voice input command from the subscriber during the voice service session;
 - and
 - selecting at least one of a plurality of voice messages to deliver to the subscriber according to the voice input command sensed.
- A19
12. *(Once Amended)* The method of claim 11, wherein the step of sensing comprises a step of converting the voice input command to digital voice data in an analog to digital converter.
13. *(Once Amended)* The method of claim 12, further comprising a step of storing the digital voice data.
14. *(Once Amended)* The method of claim 13, further comprising a step of discriminating at least one of a plurality of predetermined commands according to the digital voice data.
15. *(Once Amended)* The method of claim 14, further comprising a step of presenting the subscriber with voice message content according to the digital voice data.
